Silikal Flooring in the Beverage Industry

Clean, extremely durable, monolithic and down in a jiffy—that's Silikal reactive resin flooring. It puts breweries, wineries and bottling plants on a firm footing.

Clean, quick, safe and attractive

Go down overnight: hygienic floor

Skillfully applied by qualified installers and the new floor is fully cured and ready for action within one hour. A perfect way to keep your operation running wide open.

The daily routine at beverage producers means stress on everyone and everything, especially the floor: Crates and bottles are shaken and shimmied, pushed and pulled, filled, washed and sterilized. Things come crashing down or just shatter on the floor. And in spite of all this, the floor still has to take it all and come up "smiling." After all, in places where

food is being processed, even small bumps and bruises can mean a sanitation risk, at the very least renovation and repair work which can put the brakes on production and shipments. These are all problems and costs that can be prevented with reactive resin flooring from Silikal: simply more durability even under the heaviest loads.

Active ... floors from Silikal!

Working for the beverage industry

The high level of resistance the coatings offer to wear and tear keeps spaces dust-free—an essential factor in keeping beverage producing facilities sanitary. The seamless, monolithic surface also prevents contamination from penetrating the surface, also making the floor easier to clean. It can also withstand acids, alkalis, greases, salts or other aggressive materials.

And Silikal flooring goes down in the shortest time possible—often without causing any production downtimes at all! Reactive resins are fully cured after only one to two hours. They can also bear their full mechanical and chemical loads from this time and, of course, are also physiologically safe any time.

And last but not least, Silikal floors also have a lot to offer the eye: A wide selection of attractive colours and possibilities for individual designs with coloured flakes or quartz sands make floors not only hard-wearing but the spaces above them pleasant to look at and work in. So, no matter how you look at it: Silikal offers something for every floor.

Your call – Silikal!
An overview of the advantages.

Hygienic and clean ...

- Monolithic, seamless surface
- Resistant to alkalis, acids, greases, oils, salts and other aggressive media
- Easy to take care of

Safe ...

- Anti-skid surface grades
- Wear and tear resistant
- Can withstand hot and cold

Quick and beautiful ...

- Extremely short curing times; no interruptions in business when renovations are made!
- Easy to lay, even at temperatures below zero
- Selection of appealing colours, e. g. with coloured quartz sand or flakes mixtures as standard

Silikal production and administration in Mainhausen, near Frankfurt/Main, Germany.
